

Armaplate

Made In UK

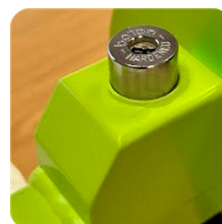

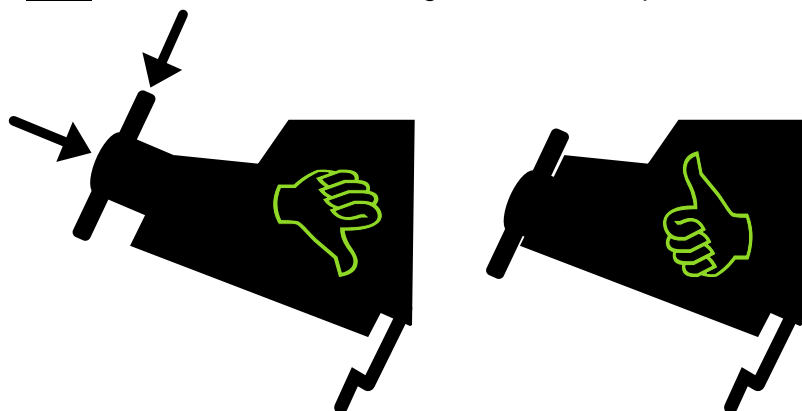

Resolute

Patent Pending AP1000

Thank you for choosing Armaplate UK to prevent the theft of your vehicle. Your business is very much appreciated. All our products are designed and manufactured right here in the UK. The AP1000 is designed to protect you from opportunist theft-attacks by presenting a strong, steel barrier which disables the steering wheel and brakes.

Before fitting the Resolute to your vehicle, please be aware that you **MUST DE-ACTIVATE** your vehicle's **EXIT/ENTRY ASSIST** function (if fitted). This is where the steering column automatically rises and falls when you enter/exit the vehicle. If you fail to do this, damage may occur to your vehicle. Armaplate UK Ltd will not be responsible for any damage to your vehicle if the Exit/Entry system is active. If other people drive your vehicle, please make sure that they are aware of this important requirement.

The Resolute is **quick and easy** to install. First of all, **lower the steering wheel** to its lowest setting and move it as close to the dashboard as it will go. Lock it in that position.

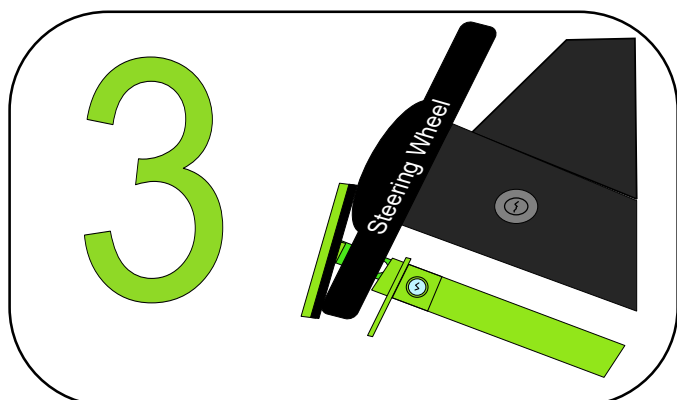

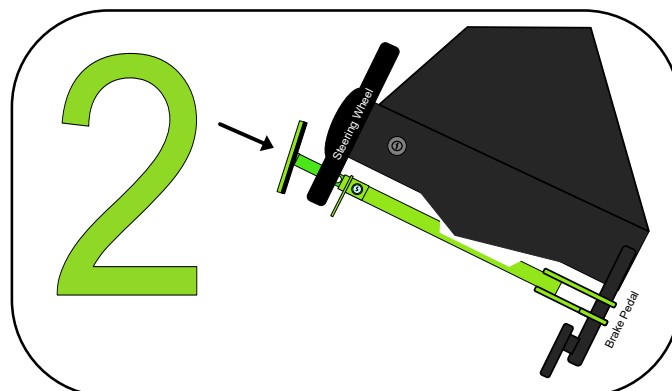

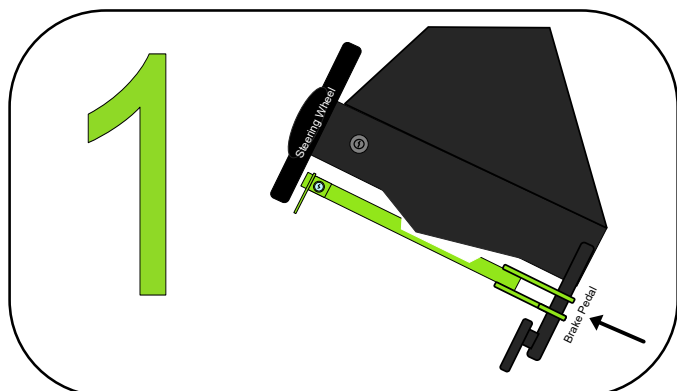

No key
required to
lock device!

Unlock the device with the key (*the lock will pop out to its fully extended position*) and remove the outer-tube. Pass the hooks of the outer-tube over your brake pedal and rotate 90 degrees. Then feed the inner-tube through the **smallest** suitable aperture in the steering wheel and into the outer-tube.

Push the lock button down to lock it, making sure that the fit of the Resolute is as tight as possible without the disc causing the horn to sound. To unlock the device, insert the key and twist it while lightly pulling up. Use clutch or gas pedal if brake pedal is not suitable
